

Create dynamic spaces with the DIRTT construction system.

Build custom interiors faster, cleaner, and more sustainably. Our proprietary technology empowers your design process, and streamlines your project. Elements of your space are precision-manufactured off-site and rapidly installed on-site. DIRTT has built adaptable spaces for over 13,000 clients worldwide.

Custom is standard.

DIRTT Construction Partners work alongside your project team to translate the design vision into DIRTT solutions. Instead of picking from a catalog of off-the-shelf options, every part, material, and finish is selected, sized, and manufactured to meet the form and functionality you need.

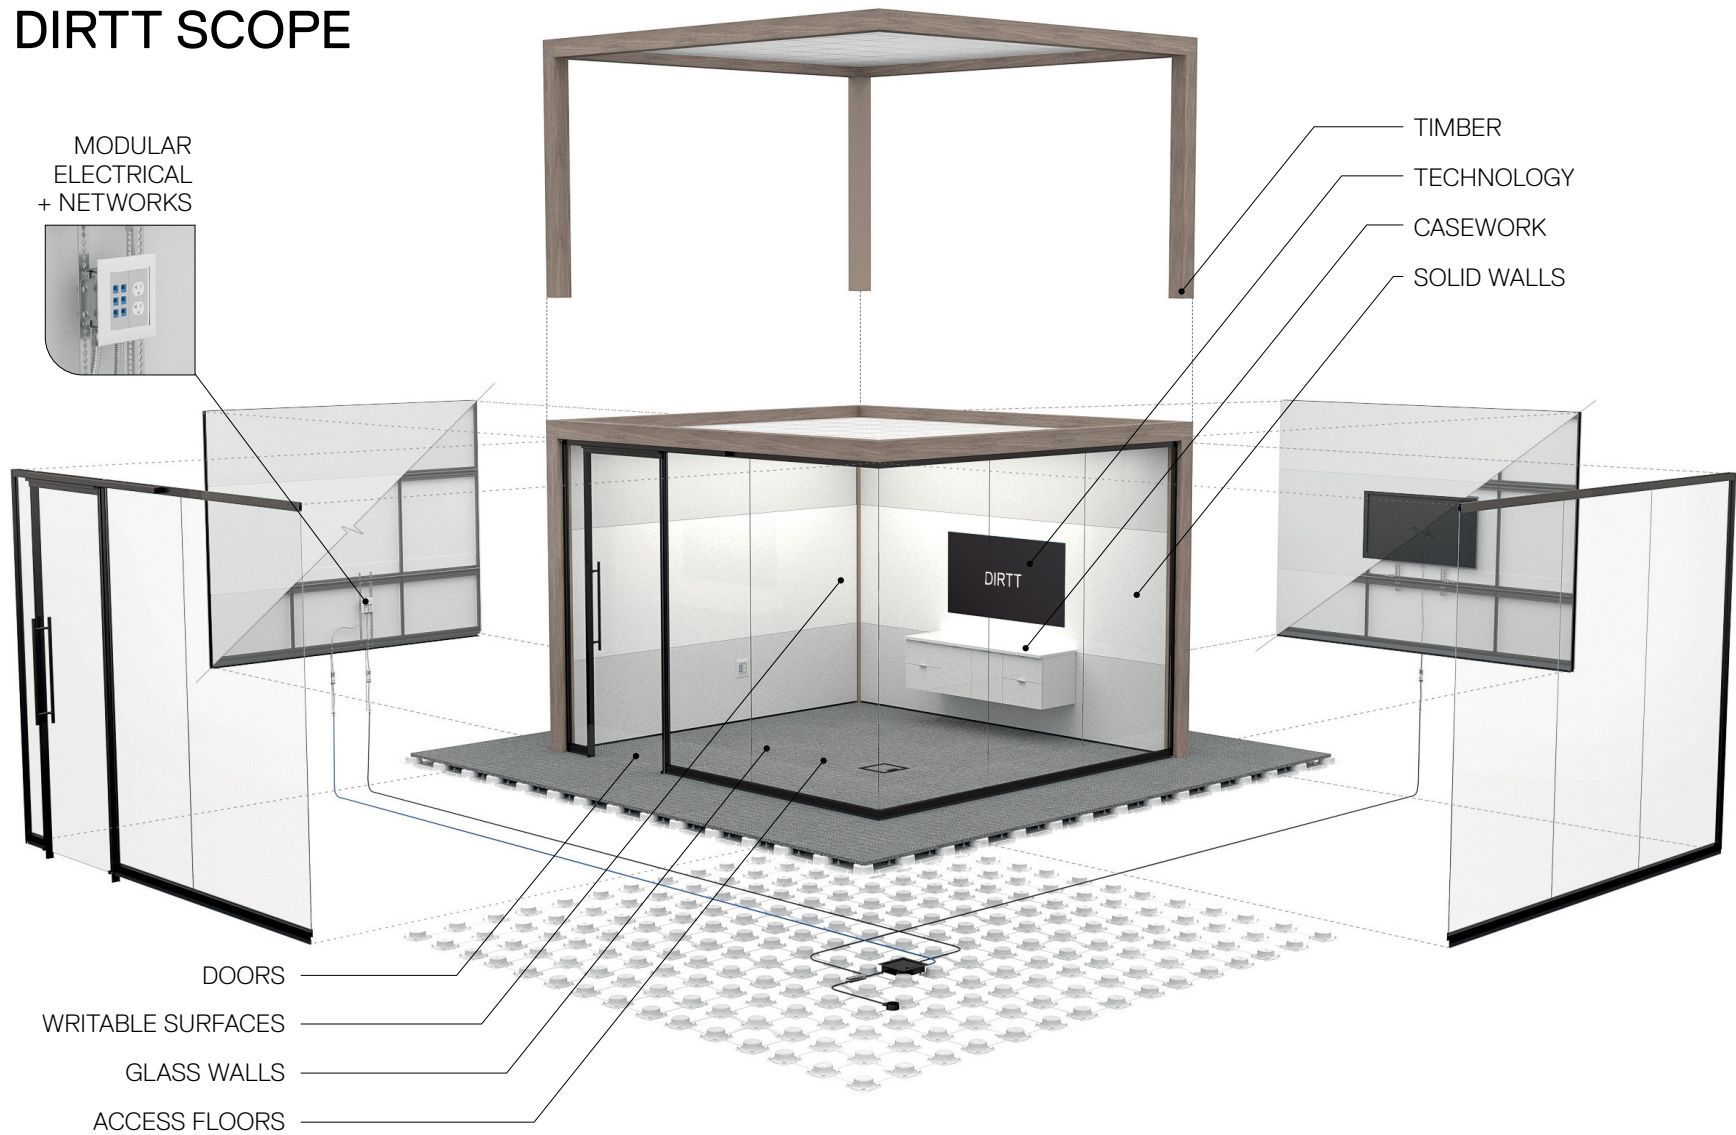

On budget. On time.

DIRTT's manufacturing software precisely captures all aspects of your design down to $\frac{1}{16}$ of an inch. Then it calculates the exact price of every component to the penny. Your space is manufactured in 21 days or less and installed rapidly.

Adapt to change.

Spaces built with DIRTT look and perform like permanent interiors, but can be adapted with ease. The modular approach lets you reconfigure with little disruption or downtime. Integrate new technology or make micro-improvements to accommodate changing needs.

THE DIRTT SCOPE

Removable wall panels

Easy access to the wall cavity for new technology integration or maintenance.

Simple architectural connections

Custom manufactured solutions precisely fit existing base building conditions.

Integrated acoustical performance

Sustainable, noise-reduction via recycled denim insulation.

Explore what building better can mean for you.
